

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

1. *(Currently amended)* A method of removing bacterial endotoxin from a pharmaceutical process solution containing an amphiphilic pharmaceutical drug or vaccine which method comprises:

a) treating the solution with a concentration of an ionic surfactant that is effective to dissociate the endotoxin from the amphiphilic pharmaceutical drug or vaccine in the solution without adversely affecting the ~~properties of the drug or vaccine including its ability of the drug or vaccine to be retained by a~~ molecular weight cut-off filter having a pore size effective to retain the amphiphilic pharmaceutical drug or vaccine substance but allow the disassociated bacterial endotoxin to pass therethrough, and

b) directly thereafter filtering the solution through a molecular weight cut-off filter ~~having a pore size effective to retain the amphiphilic pharmaceutical drug or vaccine substance but allow the disassociated bacterial endotoxin to pass therethrough and~~

c) thereafter, following removal of the bacterial endotoxin, subjecting the process solution to a further process step in which the surfactant is removed, wherein after this step the amount of ionic surfactant remaining in said solution is less than 0.01 0.002%.

2. *(original)* A method according to claim 1, wherein the pharmaceutical drug or vaccine comprises a polypeptide.

3. *(previously presented)* A method according to claim 2, wherein the amphiphilic pharmaceutical drug or vaccine comprises a glycoprotein.

5. **(original)** A method according to claim 4, wherein the antigen is a viral antigen.
6. **(Canceled)**
7. **(previously presented)** A method according to claim 5, wherein the antigen is an influenza antigen.
8. **(previously presented)** A method according to claim 5, wherein the antigen is a haemagglutinin and/or neuraminidase antigen.
9. **(previously presented)** A method according to claim 1, wherein the surfactant is an anionic surfactant.
10. **(original)** A method according to claim 9, wherein the anionic surfactant has a steroidal structure.
11. **(previously presented)** A method according to claim 10, wherein the surfactant is a bile salt.
12. **(previously presented)** A method according to claim 11, wherein the surfactant is a salt selected from the group consisting of salts of deoxycholate, cholate, glycocholate, taurodeoxycholate and taurocholate.
13. **(original)** A method according to claim 12, wherein the surfactant is deoxycholate (DOC).
14. **(previously presented)** A method according to claim 1, wherein the surfactant is present at a concentration which is at least as great as the critical micelle concentration of the surfactant.

15. (*original*) A method according to claim 14, wherein the surfactant is present at a concentration of from one and a half to five times its critical micelle concentration.

16. (*original*) A method according to claim 15, wherein the surfactant is present at a concentration of between two and four times its critical micelle concentration.

17. (*previously presented*) A method according to claim 1, wherein the molecular weight cut-off filter comprises a regenerated cellulose acetate membrane, or a polysulfone membrane.

18. (*canceled*)

19. (*currently amended*) A method according to claim ~~18~~1, wherein the further process step comprises subjecting the process solution to dialysis.

20. (*canceled*)
